# Mobile App Traffic Count Software

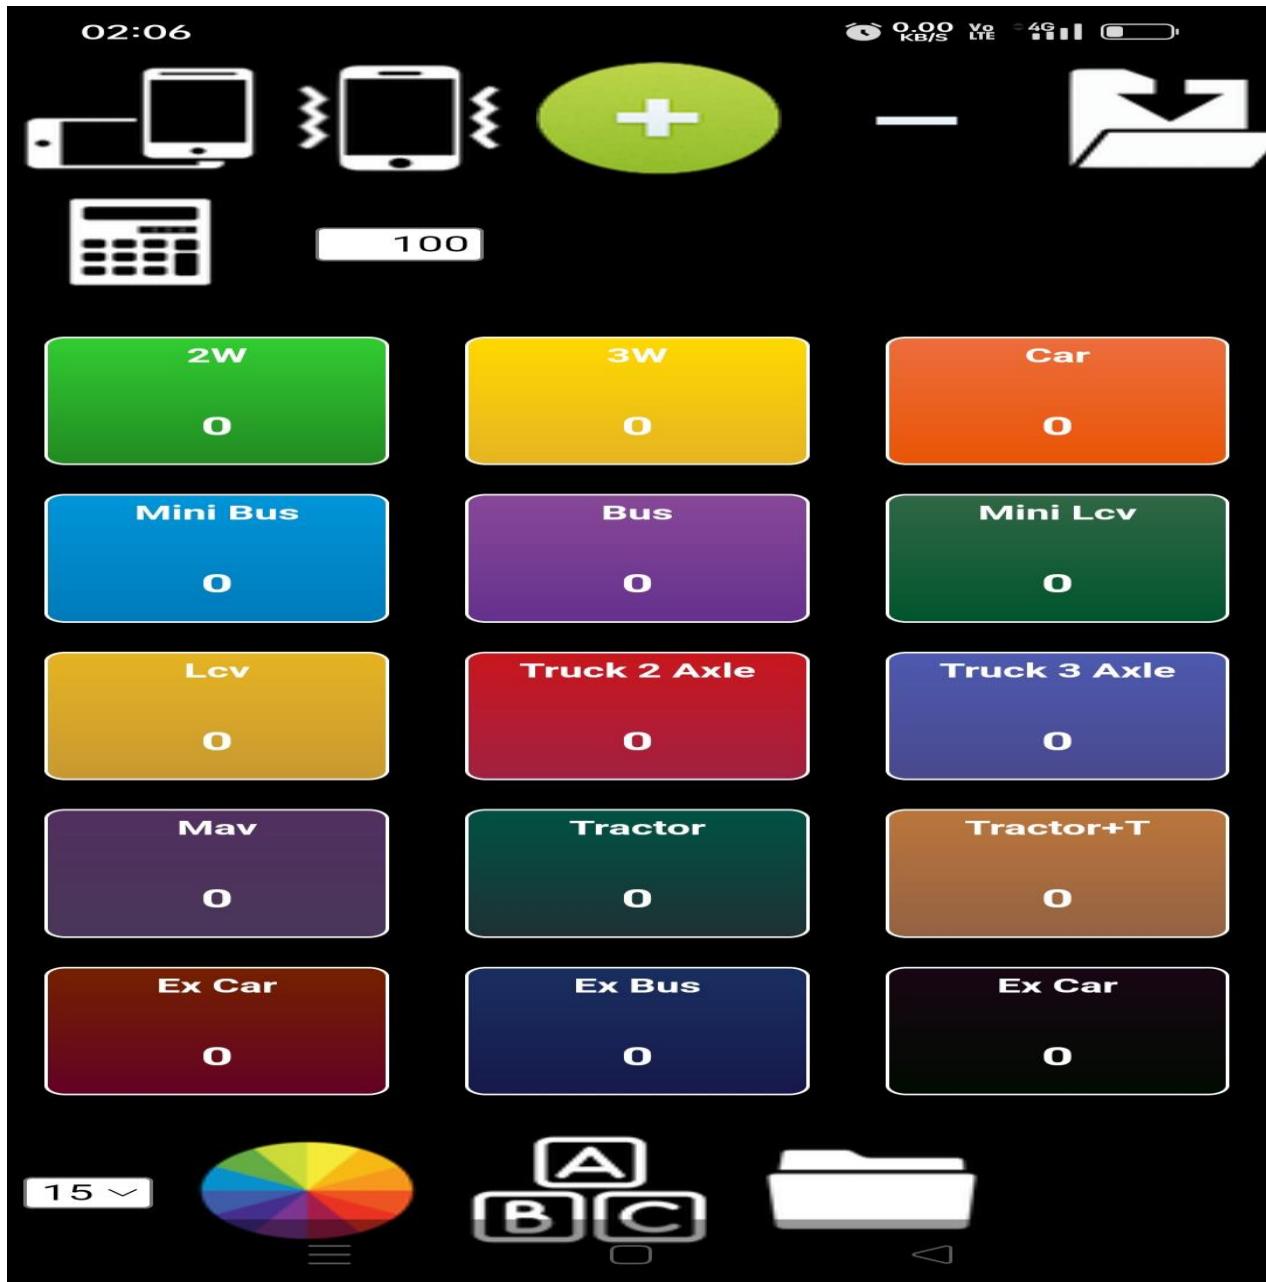

## What is Trabzon

Trabzon (TRaffic AnalyZer ) is a technology that helps in collecting useful traffic data catering to heterogeneous as well as homogeneous traffic conditions of the developing world. Trabzon provides accurate and auditable traffic data perfect for all traffic conditions. With excellent support and flexible service/ model, Trabzon has revolutionized traffic data collection and analysis.

## What Destiny Offers

Depending upon specific needs and based on an extensive market survey, Destiny has developed tailored Trabzon solutions to cater to a majority of research academia and the traffic & transportation industry.

**Trabzon** This is a permanent one stop solution for all traffic survey and data collection needs. This software is not only efficient but also saves time and effort. It provides fast and automatic processing of both Video and Live feeds (IP Camera). Trabzon Suite is a complete package which includes a Software and Scene Configuration module, an Automatic Traffic Volume and Count  (ATVC), and a Collate-Feedback-Report

**Destiny** offers another solution in Trabzon

**Trabzon:**  Have a video but don't have adequate resources to process it? Need to conduct a survey at a particular site? We do it all - Video recording, Processing, Report generation, etc.

**Customizations:** Destiny is open to developing a custom ATCC Solution. If you have a specific requirement for traffic analysis, we have a strong team of vision engineers to design and develop the solution quickly and efficiently. A few examples are Turning Movement Counts and Vehicle Trajectories at Intersections and Traffic Lights.

**Why Trabzon**
We believe that because of the uniqueness of Indian traffic conditions, India poses a unique challenge to Traffic Planners, City Administrators and Urban development consultants. Though there are some solutions available in the Western world for Traffic Planning, the same are not applicable in India and other developing countries. TRABZON has been helping the city planners and traffic consultants to analyze the traffic flow, study the statistics that are being captured from the traffic video, and using the data- plan the traffic conditions for any city in a more systematic manner.

**Benefits**
- **Trabzon** is the only camera-based system which caters specifically to the traffic scenarios of the developing countries
- Provides rich and accurate information such as vehicle class, speed and trajectory
- Removes the probability of human error in data collection and analysis
- With the help of Report module, 100% accuracy can be achieved
- Works with standard off-the-shelf cameras to analyze pre-recorded videos
- Product can also be customized to suit the specific needs of the traffic planners
- Cost effective solution for City Planners and Traffic Consultants
- Trabzon works on both Windows platforms only.

For,
**Destiny Traffic Solutions**
